Detailed Action

METHOD AND SYSTEM FOR SPLIT-PAIR RECEPTION IN TWISTED-PAIR COMMUNICATION SYSTEMS

Response to Arguments/Remarks

1. Claims 1 – 14 are pending in the application. Claims 1 – 5 are cancelled with claims 6 – 10 amended and claims 11 – 14 are new.
2. Applicant's arguments filed 7/24/2009 have been fully considered and are considered persuasive.
3. In the Final Office Action dated May 28, 2009, claims 8-10 have been indicated as containing allowable subject matter but are objected to for depending from a rejected base claim. Claims 6-10 have been amended and claims 11-14 are new. Applicant has rewritten dependent claims 8-10 in independent form including all of the elements of claim 5 from which they depended. Therefore Examiner finds claims 8 – 10 are allowable. Claims 6 – 7 have been amended to now depend from claim 8 and Examiner finds these claims allowable. New claims 11 – 14 depend from either claim 9 or 10. Examiner finds this application is in condition for allowance.

Examiner Amendment

4. With regards to the claims, an examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

CLAIMS

Please amend the claims as follows

8. (Currently Amended)

A multilane communication system for reducing signal distortion,

Art Unit: 2416

the system comprising;

a first and second pair of lines in the multiline communication system;

a first and second transceiver electrically connected to the corresponding first and second pair of lines;

a split-pair receiver electrically connected to a line of the first pair of lines and a line of the second pair of lines and configured to identify crosstalk on the first and second transceivers;

a frequency equalizer; and

a post-processing unit configured to perform MIMO post-processing on signal vectors received at each transceiver of the pair ~~of~~ of transceivers and the split-pair receiver,

wherein the split-pair receiver receives a signal including the crosstalk from the first and second transceivers and provides a corresponding signal vector to the post-processing unit, and

wherein the post processing unit is further configured to minimize crosstalk on the first and second pair of lines in the multiline communication system with the frequency equalizer, and

wherein the line of the first pair of lines is a transmitting line and the line of the second pair of lines is a receiving line.
